

Technical Council Sponsorship and Content Package

Prepared for NIT Trichy Technical Council Inductions 2026

This submission contains sponsorship research, a concise proposal framework, sponsor value mapping, activation ideas, and a social media caption for a major Technical Council announcement.

Prepared by: Technical Council applicant

Executive Summary

The Technical Council of NIT Trichy is well positioned to offer sponsors more than logo placement. It provides access to a high-intent engineering audience, credible student-led execution, technical storytelling, and measurable campus engagement.

This proposal frames sponsorship as a partnership: companies support student innovation, and in return receive visibility, recruiting access, developer adoption, product education, and goodwill with one of India's strongest engineering communities.

Core ask

Invite selected technology, SaaS, hardware, cloud, and engineering companies to sponsor Technical Council initiatives through financial support, cloud/product credits, workshops, hardware kits, hiring engagement, or challenge tracks.

Why Technical Council

Technical Council works across student-led initiatives, hackathons, workshops, campus development projects, and technical outreach. This creates a rare mix of practical execution and student curiosity.

For sponsors, the strongest value is not one event-day impression. It is repeated access to builders: students who will try tools, attend workshops, build prototypes, publish projects, and later become interns, employees, founders, researchers, or technical community leaders.

Positioning

NIT Trichy's Technical Council can be presented as a partner that converts brand presence into hands-on learning and campus impact.

Audience Value

The target audience is first-year to final-year engineering students across software, hardware, analytics, design, product, and core engineering domains.

The sponsor gets exposure to students who are still forming tool preferences and career direction. A well-designed workshop or challenge can influence what platforms, components, APIs, or workflows they adopt for the next several years.

Engagement channels

Workshops, mini-hackathons, CDI showcases, speaker sessions, challenge tracks, product credits, booth interactions, social media campaigns, newsletter mentions, and project repositories.

Sponsor Categories

Software and SaaS

Zoho, Freshworks, BrowserStack, Postman, Chargebee, MongoDB, and AWS align with web, API, cloud, testing, backend, and product-building initiatives.

Hardware and Engineering

Texas Instruments, MathWorks, and L&T; Technology Services align with embedded systems, control systems, robotics, CAD, simulation, and core engineering events.

Balanced portfolio

The best sponsorship mix should include money sponsors, product/tool partners, workshop partners, and hiring/community partners.

Sponsorship Lead Sheet

The lead sheet uses public organization-level contact routes and official company pages. Direct personal phone numbers are intentionally avoided unless listed publicly by the organization.

Company	Fit	Contact	Email / Route	Phone
Zoho	Chennai/Tenkasi SaaS company; strong fit for student developer events	Sales and developer events	asalea@zohoscript.com	1800 103 1123 / 1800 572 3535
Zoho	Chennai/Tenkasi SaaS company; strong fit for student developer events	Student developer events	apress@zohoscript.com	044-69656070 / 044-69656060
Freshworks	Chennai-origin SaaS company; relevant for product	Product	CRM	and student community partnerships
Freshworks	Chennai-origin SaaS company; relevant for product	Product	CRM	and student community partnerships
BrowserStack	Developer tooling company; strong fit for web/app testing workshops and hackathons	Supporting workshops and hackathons	Isupport@browserstack.com	+1 409 230 0346
BrowserStack	Developer tooling company; strong fit for web/app testing workshops and hackathons	Supporting workshops and hackathons	Official support form	+1 409 230 0346
Postman	API platform with Bengaluru roots; ideal for API developer tooling	Developer tooling	General/media	https://www.linkedin.com/company/postman-pl

AWS	Cloud platform; fit for cloud credits	deployment workshops	Compliance/support route	https://www.linkedin.com/company/amazon-web-services

Sponsor Package Structure

Title Partner

High-value sponsor with naming visibility across a flagship event or annual initiative, keynote slot, booth space, workshop, logo prominence, and dedicated social media mentions.

Track Partner

Sponsor owns a technical track such as cloud, embedded, API, robotics, AI, or design. They can provide problem statements, mentors, credits, or judging support.

Workshop Partner

Sponsor runs a skill-building session with tool adoption, student certificates, and follow-up project resources.

In-kind Partner

Sponsor contributes cloud credits, licenses, dev tools, hardware kits, or learning resources.

Value Delivered To Sponsors

Brand visibility across a high-trust student technical ecosystem.

Access to a concentrated talent pool for internships, hiring, ambassador programs, and developer relations.

Product adoption through workshops, starter kits, and project-based usage.

CSR and education alignment through support for student innovation and campus development.

Content value through event photos, project demos, student testimonials, and post-event impact reports.

Value Delivered To Students

Students receive exposure to real industry tools, mentors, practical problem statements, and opportunities beyond classroom work.

Good sponsorship should not feel like advertising. It should make the event better: better prizes, better workshops, better learning resources, better judging, and better pathways after the event.

Principle

Every sponsor activation should either help students build, learn, showcase, or connect.

Outreach Email Draft

Subject: Partnership opportunity with NIT Trichy Technical Council

Dear Team,

I am writing on behalf of the Technical Council of NIT Trichy, a student-led body that organizes technical initiatives, workshops, campus development projects, and innovation-focused events for one of India's leading engineering communities.

We would be excited to explore a partnership with your team for the upcoming Technical Council initiatives. Your work in technology and engineering strongly aligns with the kind of hands-on learning and student innovation we aim to promote on campus.

A partnership can include brand visibility, workshop collaboration, challenge tracks, product/tool credits, hiring engagement, and access to motivated student builders across software, hardware, and core engineering domains.

We would be grateful for the opportunity to share a concise sponsorship deck and discuss how we can create a partnership that is valuable for your brand and meaningful for students.

Regards,

Technical Council, NIT Trichy

Outreach Follow-Up Draft

Subject: Following up - NIT Trichy Technical Council partnership

Dear Team,

I wanted to follow up on our earlier note regarding a possible collaboration with the Technical Council of NIT Trichy. We believe your organization would be a strong fit for student-facing technical initiatives involving hands-on learning, developer engagement, and innovation-driven campus impact.

We are open to multiple formats: sponsorship, workshop partnership, tool credits, hardware support, technical mentorship, challenge tracks, or campus engagement sessions.

Please let us know if there is a suitable person or team we should connect with. We would be happy to share a short proposal.

Regards,

Technical Council, NIT Trichy

Activation Ideas

Zoho / Freshworks

SaaS product-building workshop, product management case challenge, startup tools credits, student founder roundtable.

BrowserStack / Postman / MongoDB

Developer tooling sprint where teams build, test, document, and deploy a small API-backed application.

Texas Instruments / MathWorks / LTTS

Embedded systems bootcamp, control systems simulation challenge, hardware prototyping support, CAD and validation workshop.

AWS

Cloud deployment credits, serverless workshop, architecture clinic, post-event cloud project showcase.

Branding Deliverables

Logo placement on event posters, social media posts, registration pages, certificates, and on-ground banners.

Dedicated sponsor mention in opening and closing ceremonies.

Workshop title branding where relevant.

Sponsor booth or digital interaction desk.

Post-event impact report with student participation, engagement metrics, photos, and project highlights.

Campus Engagement Plan

The strongest campaign should move through three phases: curiosity, conversion, and continuity.

Curiosity

Short teaser posts, problem-first reels, and countdown stories.

Conversion

Clear registration posts, WhatsApp-forwardable captions, mentor announcements, and prize/benefit reveals.

Continuity

Live event updates, winner spotlights, project threads, and sponsor-tagged impact recaps.

Measurement Plan

Sponsors should receive a clean impact report after the initiative.

Suggested metrics include registrations, attendance, branch/year distribution, workshop completion count, social reach, repository/project count, demo submissions, booth interactions, and post-event feedback.

Qualitative proof matters too: student testimonials, photos, demo screenshots, winning project summaries, and mentor comments.

Negotiation Notes

Start with partnership value before price. Sponsors respond better when the proposal explains the audience, format, outcomes, and brand return clearly.

Keep options flexible: many companies may prefer in-kind support, credits, mentors, or workshops over direct cash sponsorship.

For early conversations, ask for the correct team first: university relations, developer relations, marketing, CSR, partnerships, or talent branding.

Risk And Credibility Notes

Avoid overpromising reach numbers unless past analytics are available.

Use official public contact routes and verify every lead before sending mail.

Keep sponsor activations student-first. If the activation feels like pure advertising, engagement will drop.

Maintain a tracker for company, contact route, date contacted, response, follow-up date, and next action.

Social Media Caption

What if the next big idea on campus is already sitting in your notebook?

Pragyan has always been where NIT Trichy turns curiosity into circuits, code, prototypes, debates, builds, and breakthroughs. This year, the stage gets bigger, the problems get sharper, and the energy gets louder.

From robotics and product challenges to workshops, exhibitions, and student-built solutions, Technical Council is bringing together the people who do not just ask 'what if?' - they build the answer.

Registrations open soon.

Bring your team. Bring your wildest idea. Bring the version of you that wants to build something real.

#TechnicalCouncil #NITTrichy #Pragyan #BuildTheFuture #CampusInnovation

Submission Checklist

10 companies listed with two public contact routes each.

Sponsor fit explained for each company.

Concise sponsorship proposal included.

Professional outreach and follow-up drafts included.

Social media caption included.

Lead sources provided for credibility.

Source Notes

Sources used include official contact pages from Zoho, Freshworks, BrowserStack, Postman, Chargebee, L&T; Technology Services, Texas Instruments, MathWorks, MongoDB, and AWS. The lead sheet includes source URLs for verification.

Before sending any outreach, verify each contact route once more on the company's official website because public contact routes can change.
